Library Management System

Name – Haneet Arya

Reg. No. – 20BIT0153

Subject – Java Programming (CSE1007)

Faculty – Anitha A

Aim and Objective – To create an Application for managing any Library with proper details of Address, Member, Issues, Books, Student.

Introduction –

A library management is a project that manages and stores books information electronically according to students needs. The system helps both students and library manager to keep a constant track of all the books available in the library. It allows both the admin and the student to search for the desired book. It becomes necessary for institutions to keep a continuous check on the books issued and returned. This task if carried out manually will be tedious and includes chances of mistakes. These errors are avoided by allowing the system to keep track of information such as issue date, last date to return the book and thus there is no need to keep manual track of this information which thereby avoids chances of mistakes.

Thus this system reduces manual work to a great extent allows smooth flow of library activities by removing chances of errors in the details.

Hardware Specifications –

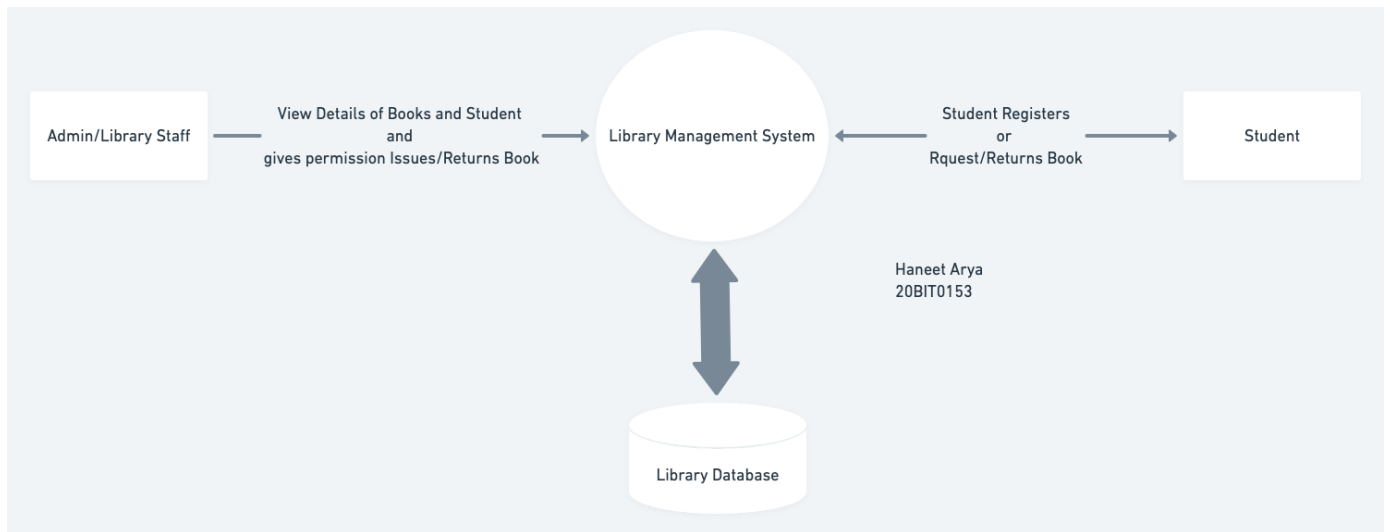

- Macbook Air (Intel i5, Intel HD Graphics 6000, 8 GB ram, 128 GB SSD Storage)

Software Specifications –

- Operating System – MacOS (OSX)
Compiler – IntelliJ Community
Database – MySQL with Xampp

Architecture –

- DFD –

- Modules –

1. Admin/Staff login: These are the one who administers the system by adding or removing books into and from the system respectively and also responsible for issuing and taking returns of books.
2. Add and Update Books: The admin/staff can add books to the system by entering the details of the books and can even update the details.
3. Issue: The admin/staff can view details for the book issuance
4. Return: The admin/staff can view details for the book returns

Experimental Analysis –

- Coding –

db.java

```
package com.haneetarya.librarymanagementsystem;

Result and Discussion – We get a Library Management Application based on JavaFX and MySQL Database. This will result ease in managing any institutions Library.

Conclusion – This Application will lead the Institutions to maintain the library in very effective manner having every option to manage the Library.
